

SKILLS SUMMARY

Data & AI Analyst passionate about uncovering insights that drive smarter storytelling and user engagement. Skilled in SQL, Python, experimentation design, and causal inference. Experienced in building analytical frameworks and dashboards that translate product data into measurable business impact. Strong background in machine learning and applied statistics with a focus on media and responsible AI.

Critical Thinking	Data Analysis, Data Science	Tensorflow, PyTorch, NLP Techniques	AWS/Azure
Investigative Research	Responsible AI	UMAP/HDBSCAN	Agentic Systems
Team-Oriented	.NET/C#, Python, SQL	Tableau, Power BI	REST APIs, Postman
Leadership	Pandas, NumPy, Scikit-learn	LLM Fine-Tuning	Containerization (Kubernetes, Docker)

EDUCATION

Georgia Institute of Technology | 2025 - May 2027
M.sc. in Computer Science, specialization in Machine Learning

Vanderbilt University
B.sc. in Computer Science, Psychology

EXPERIENCE & LEADERSHIP

Software Engineer 1 | Cox Enterprises | April 2024 - July 2025

- Built and deployed data pipelines and analytics dashboards tracking performance metrics across automation workflows, processing 10,000+ monthly transactions with 99% accuracy.
- Leveraged SQL and Python to extract, transform, and analyze operational data, identifying key efficiency drivers that led to a **35% improvement in delivery speed** and **25% increase in adoption**.
- Collaborated with cross-functional teams (Product, Infrastructure, and Security) to establish **data collection standards** and reporting frameworks for continuous monitoring and optimization.
- Integrated **robustness-focused engineering** practices: implemented automated testing, debugging protocols, adversarial input handling, and continuous monitoring tools to ensure **safe and reliable** system behavior in production environments. Practiced a product-led mindset via conducting 20+ stakeholder interviews, iterating on early prototypes, and aligning implementation with business goals, resulting in **35% faster feature delivery** and a **25% increase in internal adoption**.

Software Engineer | Art Sphere | Dec 2023 - Feb 2024 (Contract)

- Developed a full-stack employee management system with a dynamic front-end UI to support over 100 staff members, automating time-tracking and project info access, **saving the company \$20K+ annually and increasing user adoption by 10% and engagement by 25%**.

Cyber Security Analyst | BBS | Istanbul, Turkey | July - Aug 2022

- Enhanced system resilience by executing penetration tests and DDoS simulations, leading to a **25% faster incident response** and preventing **thousands of potential malicious requests daily** through firewall optimization.

PROJECTS & RESEARCH

Who Congress Actually Listens to on Artificial Intelligence - Built an end-to-end ML research pipeline to ingest, chunk, and vectorize **300+ Congressional AI documents** using LLM embeddings. Deployed semantic retrieval + NER to extract every reference to key institutions, corporations, and experts. Created a **weighted influence model** combining policy proximity, voice prominence, and frequency of mention to quantify who shapes U.S. AI policy. Produced investigative visuals and an interactive hierarchy that reframed assumptions around "Big Tech influence," showing that **federal agencies accounted for ~80% of total weighted influence**, far exceeding CEOs and corporate lobbyists. Published an accompanying **journalistic analysis** examining the gap between media narratives and institutional reality. [Who Congress Actually Listens to on Artificial Intelligence](#)

Media Bias & Public Perception of Artificial Intelligence - Collected and analyzed **10,000+ news headlines** from global outlets using Python, TextBlob, and Scikit-learn. Built sentiment and topic-modeling pipelines (Naive Bayes, Random Forest) to identify bias patterns in media framing of AI. Quantified disparities between **editorial tone, outlet ideology, and AI portrayal**, demonstrating how news language shapes public trust. Explored ethical dimensions of machine interpretation in journalism, specifically data transparency, accountability, and misinformation risk.

Spam Detection Model - Built and optimized ML models (Naive Bayes, Random Forest, KNN) for spam detection in large-scale Twitter datasets, focusing on improving model robustness and minimizing false positives under adversarial data conditions. **Achieved accuracy rates of >80%** - [Spam Tweets.ipynb](#).

NYC Subway Analysis - Designed and implemented a Python-based analytics tool to assess the performance of NYC subway lines using public transportation datasets. Created data visualizations and insights to highlight inefficiencies.
